

# The growing mobile menace.

New research from Sapio and Menlo Security lays bare the scale of the smartphone cyber threat to enterprises.

## Mobile threats to the enterprise are on the rise — and 53 percent of IT decision makers aren't ready.

**53%** of respondents said it's **not possible to be prepared** for all the tactics and strategies used by attackers targeting mobile devices

**3/4** believe **end users are more open to attacks** on mobile devices than a year ago

**Phishing** is still the **most common** mobile security attack

### Split decision:

**55%** of IT decision makers believe organizations should be responsible for securing mobile devices used for work

What do the other **45%** think?

### Key findings:

**76%**

believe end users are more open to attacks on mobile devices than a year ago

**25%**

think their employees report mobile browser vulnerabilities every time they occur

**86%**

said attacks on mobiles are becoming more frequent and sophisticated

**93%**

said mobile security was a high priority in 2021. **59%** said it was very high

## The hand-held insider threat.

**34%**

Only 1/3 employees **update their mobile device or operating system** as soon as a new patch is issued

**82%**

of IT decision makers have found **malicious document downloads** on corporate-owned mobiles in the past 12 months

**62%**

Most employees think **iOS (62%)** and the **Apple App Store (58%)** are **more secure** than Android & Google Play

## A 100% safe space for mobile working.

Menlo's secure web gateway (SWG) with web isolation technology completely separates mobile devices and users from internet-borne threats.

**550 employees: zero endpoint infections**

It can be deployed quickly at infinite scale to completely eliminate the threat of malware from mobile websites, emails and infected documents.

**All attempts to access malicious website stopped**
